INTRODUCTION

The information provided here in compressed tabular form provides updates to the two volume book on flowering plants [Wagner, W. L., D. R. Herbst, and S. H. Sohmer. 1999. *Manual of the flowering plants of Hawai`i, revised edition* with supplement by Wagner, W. L. and D. R. Herbst. University of Hawaii Press, 1919 pp. in 2 volumes. (Bishop Museum Special Publication 97)], and to the similar volume on ferns [Palmer, D.D. 2003. *Hawai`i's Ferns and Fern Allies*. University of Hawaii Press, Honolulu]. The tables provide all corrections and additions with relevant literature through February 2012.

The intent of this supplement is to summarize the numerous changes published in the *Records of the Hawaii Biological Survey* and other literature on Hawaiian vascular plants, including other research papers currently in press or soon to be submitted for publication. In a few cases a specialist provided information or identifications (listed as “pers. comm.”) for which there is no current or planned publication. Not all records reported as naturalized have been accepted by us as naturalized as many appear to represent adventive collections and are so noted. Similarly, some taxonomic changes are not always accepted, and if they are not an explanatory statement is given. The information, presented in tabular form, comprises an abbreviated listing of nomenclatural and taxonomic name changes, resurrections of taxa from synonymy, records of naturalized species previously undocumented in the Hawaiian Islands, records for naturalized species previously known only in cultivation or as adventives in the Hawaiian Islands, new island or intraisland range extensions of both naturalized and native species, the rediscovery of species presumed extinct or not collected for many years, and the correct names for plants previously misidentified in Hawaiian literature, particularly in the *Manual*. Included in the supplement are nomenclatural novelties that have not been published and are in press, submitted, or in late stages of manuscript preparation for publication elsewhere. We do not accept any of them as published here. While we cite the names of unpublished taxa and combinations for completeness, we do not intend to validate any of them here.

In addition to tracking the changes to the flowering plants relative to the publication by Wagner et al. (1999) [Table 1], we are now also including changes for the ferns relative to Palmer’s book on Hawaiian ferns (2003) [Table 2]. We also provide summary of new information on naturalized gymnosperms [Table 3] and changes to the family level classification [Table 4] as presented on the website by Peter F. Stevens (2001) and Mabberley (2008). The *Manual* used a family delimitation outlined by Cronquist (1981), but given the amount of phylogenetic work, particularly molecular studies since the early 1980s, we have updated the family delimitation to reflect relationships based on this vast amount of new work. We are currently using Stevens’ phylogeny website and Mabberley’s book as comprehensive sources as it covers all families worldwide, provides molecular and other evidence supporting the changes and literature references. Palmer

(2003) arranged the Hawaiian ferns alphabetically since at that time there was no universally used family classification of the ferns, but he did assign each genus to an appropriate family in the text, which is what was used on the *Flora of the Hawaiian Islands* web site. We have made updates to family level classification for the ferns based on Smith et al. (2006). Table 4 shows the family used in the book publications in the first column, the new family classification in the second column, and the genera affected in the third column.

The Table 1, 2 and 3 includes five categories of information:

1. The first column (Page) lists the page number in the *Manual* where the subject taxon appears, or where it would appear had it been included originally in the *Manual*. Also included here are the page numbers in italics of any illustrated taxon for which the name has changed.
2. The second column (Taxon) gives the currently accepted scientific name; it may differ from the name used in the *Manual*.
3. The third column (Type of Record) specifies the kind of record from among the following categories: taxa new to the state; newly naturalized plants previously known only in cultivation; new distributional records; rediscovery of species presumed extinct; new taxa of native plants; taxonomic or nomenclatural changes; resurrection of taxa relegated to synonymy in the *Manual*; corrected identifications; and changes in distribution status.
4. The fourth column (Citation) provides the author-date citation for the reference in which the information was published. Unpublished sources also are included as these contain more extensive information on nomenclatural or taxonomic changes that the cited authors (in most cases) plan to publish. The entries include both original research literature and literature discussing the changes as they apply to Hawaiian taxa. A list of the literature cited follows the table.
5. The fifth column (Comments) provides brief remarks to clarify the entry or explain its wider implications, or to express our opinion on the new information or proposed change.
